

Complete the following exercises in the language of your choice. Demonstrate that your solutions successfully solve the required problems. Some problems may not be solvable in all languages; in such a case an appropriate language should be used.

## Description:

You're fed up about changing the version of your software manually. Instead, you will create a little script that will make it for you.

## Exercise

Create a function `nextVersion`, that will take a string in parameter, and will return a string containing the next version number.

For example:

```
nextVersion("1.2.3") === "1.2.4";  
nextVersion("0.9.9") === "1.0.0.";  
nextVersion("1") === "2";  
nextVersion("1.2.3.4.5.6.7.8") === "1.2.3.4.5.6.7.9";  
nextVersion("9.9") === "10.0";
```

## Rules

All numbers, except the first one, must not be greater than 10: if there are, you have to set them to 0 and increment the next number in sequence.

You can assume all tests inputs to be valid.

Your objective is to complete a function `createSpiral(N)` that receives an integer `N` and returns two-dimensional array where numbers from 1 to `N` should be represented as clockwise spiral.

Return an empty array if  $N < 1$

Examples:

`N = 3` Output: `[[1,2,3],[8,9,4],[7,6,5]]`

1	2	3
8	9	4
7	6	5

`N = 4` Output: `[[1,2,3,4],[12,13,14,5],[11,16,15,6],[10,9,8,7]]`

1	2	3	4
12	13	14	5
11	16	15	6
10	9	8	7

`N = 5` Output:

`[[1,2,3,4,5],[16,17,18,19,6],[15,24,25,20,7],[14,23,22,21,8],[13,12,11,10,9]]`

1	2	3	4	5
16	17	18	19	6
15	24	25	20	7
14	23	22	21	8
13	12	11	10	9
